In the scientific-educational center for the Georgian language technology of the Georgian Technical University with AR/122/4-105/14 grant support of the Shota Rustaveli National Science Foundation there is worked out project "One More Step Towards Georgian Talking Self-Developing Intellectual Corpus". The project is one of the important sub-projects of the long-term project "The Technological Alphabet of the Georgian language" [1] of this center.

At the presentation we will briefly overviewed the first trial versions of the voice managed automatically systems of generating and testing of the solving skills of the Georgian logical tasks and analogies with voice-managed tools. These trial versions are constructed in confines of the project "One More Step Towards Georgian Talking Self-Developing Intellectual Corpus" on the base of the Logical Grammar of the Georgian Language [2], [3].

Acknowledgment. This work is supported by the AR/122/4-105/14 grant of the Shota Rustaveli National Science Foundation.
